Nutter Custom Construction selected to build foster homes for local nonprofit

SARASOTA, Fla. – [Nutter Custom Construction](#), a Sarasota-based residential custom-building company, has been selected to build the foster homes for [All Star Children's Foundation](#), an organization with the goal of providing state-of-the-art treatment for childhood trauma on its Campus of Caring.

Nutter Custom Construction will build six single-family homes for All Star Children's Foundation. The residential homes will accommodate individual children and siblings and incorporate a community recreation area, playground, picnic areas, community garden and an outdoor theater.

The 5-acre campus in Sarasota will provide a place for children, from infants to age 18, who have entered the foster care system due to abuse or neglect. The builder aims to start construction in the first quarter of 2018.

“Our family-oriented team is very excited to be contributing to this much-needed and worthy project for our community,” said T.J. Nutter, founder and president of Nutter Custom Construction. “We look forward to bringing these welcoming, residential homes to children in need in our area.”

The entire All Star campus is designed as a trauma-sensitive environment, including the homes Nutter Custom Construction will build. On-site trauma-informed therapy will focus on physical, psychological, and emotional safety for children. All Star understands the effects trauma has on the brain are severe, but knows science has proved those effects can be reversed. All Star will empower children, teaching them that they have choices and enabling them to use that power to make specific positive changes in their behavior and for their future.

About Nutter Custom Construction
